

How to clean with Toucan Eco

What is it used for?

It's a multi-surface antibacterial disinfectant that kills 99.999% of microorganisms and is ideal for daily cleaning.

It doesn't replace strong degreasers and descalers.

How to use

Activation

To use, simply spray, wipe or mop any surface, including glass and fabrics as part of your normal cleaning practices.

Apply as a mist

It also works as a deodoriser, you can apply it as a mist for disinfecting large areas and it's great for scrubber dryers.

And repeat

Once you've run out or before the solution reverts back to salty water – you simply make more.

- 1 Surfaces & equipment
- 2 Stainless steel, windows & glass
- 3 Textiles & carpets
- 4 Hard floors
- 5 Washroom

Think of it as a multipurpose disinfectant and cleaner.

Simply make, spray, wipe or mop.

The solution will disinfect all hard surfaces and fabrics, killing 99.999% of bacteria.

And with a gentle pH of between 7.7 and 8.2 it's a non-aggressive cleaner too, leaving a smear-free finish on glossy surfaces without any chemical residue.

Use it anywhere. There's no need for one cleaner for the bathroom and another for the kitchen – and use it liberally as it's virtually free.

It's ready to use - so don't dilute it or mix it with chemicals as it's made at the perfect concentration.

It's great for daily cleaning, and can be used as part of a deep clean for disinfecting areas, but it's not a heavy degreaser or descaler.

No special equipment is needed – use whatever cloths, bottles and mops or scrubber dryers you normally use, again and again as we're into reusing not wasting! But for best results use microfibre.

Once you've run out – or after five to seven days when the solution has reverted back to slightly salty water – you simply make more.

For wiping – spray the surface, even spray the cloth, then rub to remove all solution.

For fabric – spray and leave to soak before removing with a clean cloth or brush. Repeat until clean.

For mopping – it's great for pre-soaked microfibre or spray mopping. And it's fine to spray alongside a bucket of hot water if that's what you're used to.

For floor machines – just add the solution and scrub away.

It's also great as a **deodoriser** – it's not designed to mask smells as it's pretty much fragrance free, but does kill the bacteria that causes the smell. And as it's non-allergenic you can happily spray away.

A general cleaning tip is to always clean from the cleanest to dirtiest area and top to bottom. And always with clean tools.

The greener way to clean workplaces safely
